Servo-Controlled Press Cushion
MASTERform™
INTEGRATED FORMING SYSTEM
Enabling more effective metal shaping and forming since 1964, HYSON Metal Forming Solutions designs and manufactures precision force solutions for critical applications. Our solutions, integrated into mills, presses and stamping tools, help master the complexity of metal forming by providing the right solutions for your application. HYSON offers both off-the-shelf and custom-designed products and incorporates the highest level of safety into our solutions.

Our engineering and manufacturing teams paired with our state-of-the-art products help drive:

- Safety
- Repeatable and efficient processes
- Reduced maintenance and repair costs
- Higher quality output

HYSON Press Solutions

Built upon a long history and experience with force solutions for the Die, HYSON has leveraged that knowledge to engineer and manufacture innovative capital equipment solutions for the press.

By having a thorough understanding of stamping processes, at the same time positioning ourselves to have a front line perspective on future trends and challenges, The HYSON Metal Forming Team is able to develop solutions for tomorrow. As the previous rules and guidelines of the stamping industry continue to change and become obsolete, it is our commitment to provide the solutions necessary to tackle upcoming forming challenges, think outside the box, and rewrite the way metal is formed.

THE KEY ADVANTAGES OF OUR SOLUTIONS ARE TO PROVIDE:

<table>
<thead>
<tr>
<th>FLEXIBILITY</th>
<th>REPEATABILITY</th>
<th>CONTROLLABILITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ability to change parameters quickly, and to adapt to process and material variations</td>
<td>The confidence that you will see the same quality on the 500,000th part that you did on the first</td>
<td>The ability to control the force dynamically throughout the stroke with a high level of accuracy and response times in milliseconds</td>
</tr>
</tbody>
</table>

NEXT-GENERATION PRESS CUSHION SYSTEM

With the ability to be installed into any press, our integrated forming systems provide an immediate upgrade to stamping equipment

PROGRAMMABLE KNOCKOUT SYSTEM

Integrated into press controls, INTELLImax™ Knockout System enables flexible, timed part knock out
HYSON METAL FORMING SOLUTIONS… FOR THE PRESS

With an extensive and unrivaled portfolio of metal forming solutions, HYSON provides the right solution for the right application. From an air cushion crossover to integrating the most sophisticated forming features on the market, we have a solution that will streamline your forming operations. Solutions are dependent upon your needs and include:

NITROGEN PRESS CUSHION

TRUEform™ INTEGRATED FORMING SYSTEM
TRUEform™ Integrated Forming System utilizes high-pressure nitrogen gas to deliver accurate force, enabling customers to attain true, high quality formation of stamped parts.

FEATURES INCLUDE:
- Self-Contained
- Low Pressure Rise
- Compact Design
- Energy Efficient
- Ram or Bolster Mounted

HYDRAULIC PRESS CUSHION

OPTIform™ INTEGRATED FORMING SYSTEM
OPTIform™ Integrated Forming System utilizes high-pressure hydraulic fluid to deliver controlled force capable of lock down at BDC and optimizing your forming processes.

FEATURES INCLUDE:
- Delay Capable
- Low-Pressure Rise
- High-Force
- Simple Force Adjustment
- Low Contact and Return Force
- Ram or Bolster Mounted

SERVO-CONTROLLED PRESS CUSHION

MASTERform™ INTEGRATED FORMING SYSTEM
MASTERform™ Integrated Forming System utilizes advanced servo valve technology to precisely control the force, allowing you to master your metal forming process.

FEATURES INCLUDE:
- Adjustable Force Profiles
- Delay Capable
- Part Knockout
- Reverse Forming
- Pre-Acceleration
- Bolster Mounted
REAL TIME FORCE CONTROL

Once HYSON’s forming system is integrated into a press, the user has the ability to program, or recall a stored program, and utilize unique force profiles specific to the current part geometry with the HMI. At the heart of the real time force control is the closed-loop feedback system which brings the system to life.

INTEGRATION
Integrated forming systems can be incorporated into any press, new or old, including hydraulic, mechanical and servo.

CONTROLLABLE FORCE PROFILES
The ability to work with trouble areas in the part and provide force at a specific time throughout the stroke at as many points necessary.

HMI
HYSON’s standard force program allows users to set and create force profiles, which can be saved and brought up for later use. The key is being simple and intuitive to use.

CLOSED-LOOP FEEDBACK SYSTEM
Utilizing a team of transducers to monitor pressure, position, and temperature, MASTERform™ is able to analyze its performance and make adjustments on the fly constantly giving feedback to the controller up to 200 times per mS.
MASTERform™ PROVIDES UNLIMITED POSSIBILITIES from straight-forward to waving force recipes and anything in between, enabling high-quality, more consistent part forming.
While presses control position and velocity, HYSON’s MASTERform™ provides the adjustable FORCE, giving the maximum controllability, flexibility and repeatability possible in a stamping process.

Dynamic force throughout the stroke allows for the flexibility to control the forming process, reducing part quality problems, increasing productivity, and allowing the system to work with the material.

Using high-pressure components capable of operating parameters of 2ρ5 bar, 000psi will allow for more force in the same space as other technologies.

Designed to decrease press wear and extend press life, the system can delay at BDC to avoid reverse tonnage back into the part and the press.

In order to reduce initial press shock, the cushion can be programmed to begin the move prior to the tool contacting the material, and then allowing the press to catch up.

When the press is dwelling or in a stationary position and at BTD, the servo cushion is capable of increasing force to provide a secondary forming operation, allowing for better press utilization.

Providing a burst of energy after BDC, the cushion is capable of knocking parts loose from the lower tool, allowing better integration with transfer, automation and robotic equipment.

The HYSON program features an easy-to-use interface which will allow the user to have complete control over the functionality of the cushion.

The health monitoring module will allow for determining maintenance items such as temperature, oil cleanliness and filter replacement. In addition, the system is capable of remote connecting to troubleshoot and make program updates over the internet from anywhere in the world.
SOLUTION

Dynamic force throughout the stroke allows for the flexibility to control the forming process, reducing part quality problems, increasing productivity, and allowing the system to work with the material.

Using high-pressure components capable of operating parameters of 275 bar/4000psi will allow for more force in the same space as other technologies.

Designed to decrease press wear and extend press life, the system can delay at BDC to avoid reverse tonnage back into the part and the press.

In order to reduce initial press shock, the cushion can be programmed to begin the move prior to the tool contacting the material, and then allowing the press to catch up.

When the press is dwelling or in a stationary position and at BTD, the servo cushion is capable of increasing force to provide a secondary forming operation, allowing for better press utilization.

Providing a burst of energy after BDC, the cushion is capable of knocking parts loose from the lower tool, allowing better integration with transfer, automation and robotic equipment.

The HYSON program features an easy-to-use interface which will allow the user to have complete control over the functionality of the cushion.

The health monitoring module will allow for determining maintenance items such as temperature, oil cleanliness and filter replacement. In addition, the system is capable of remote connecting to troubleshoot and make program updates over the internet from anywhere in the world.
THE PERFECT TRANSFER OF FORCE

As the press ram travels from top dead center towards bottom, the die closes and the die cavity starts to make contact with the binder. As the part is being formed, the binder engages the transfer pins which allows the cushion to apply a counter force into the process. Due to the advanced servo valve and feedback mechanisms within the MASTERform™ system, the transfer of force is controllable, flexible, and repeatable.

HYDRAULIC POWER UNIT

HYSON’s standard power units have been designed to optimize the performance of each integrated forming system. Housed within the power unit are key components such as:

- Electrical cabinet
- Reservoir
- Heat exchanger
- Pump
- Motor
- Accumulator

HMI – TOUCHSCREEN INTERFACE

HYSON’s standard Human Machine Interface is the system component which:

- Allows the user to interact with the technology
- Provides real-time adjustment
- Includes software that is simple and intuitive to use

Included with the HMI are:

- 203mm / 8-inch touchscreen monitor
- Emergency stop button
- HYSON designed standard cushion program

HMI is ready to mount to the press frame as standard, or purchase the optional pedestal stand.
When using the graphs below, if the intersection falls within the blue region a small HPU can be used. If the intersection falls within the green a medium HPU will be needed. Anything outside the blue or green will not be able to utilize standard HPUs.

The first center of its kind in Northeast Ohio, HYSON’s Metal Forming Technology Center is a platform for metal forming advancement, innovation, collaboration and development. Opened in February 2015, the Metal Forming Technology Center was created to focus on the advancement of forming ultra and advanced high strength materials, and help enable efficient and reliable forming of complex shapes.

The center is equipped with the latest forming technology, including a 300-ton (US) Servo Press, HYSON’s 50-ton (US) MASTERform™ Integrated Forming System and INTELLimax™ knockout system. The Center not only serves as a central hub for customer try-outs, but also for academic, steel and OEM collaboration and research.

With the launch of this center, HYSON is helping lead the development of next-generation force products that help solve forming issues, improve customer’s processes and enable the future of lighter and safer metals with more efficient forming.

Customers, OEM press manufacturers, steel mills, die shops and metal stampers interested in partnering with HYSON on the advancement of metal forming and utilizing the MFTC should contact their local sales rep or our inside sales team.
AS A DESIGNER AND MANUFACTURER OF PRECISION FORCE SOLUTIONS

HYSON focuses on enabling more efficient and reliable forming of critical metal products and complex parts in the following industries:

- AEROSPACE
- MILITARY
- AUTOMOTIVE
- LAWN & GARDEN
- APPLIANCE
- MEDICAL
