The latest in chock separation technology, HYSON Metal Forming Solutions’ Roll Balance Cylinders (RBCs) provide a more reliable force than hydraulic or silicone solutions. RBCs keep work rolls separated which helps maintain roll face integrity and maximize productivity.

These self-contained, quick change cylinders are engineered with robust, mill-duty components (including bore seals, large diameter and thicker walls) to resist bending, leaking and jamming. Integrated safety features like charge/discharge ports keep safety at the forefront.

Genuinely HYSON Solutions

Designed to improve mill safety and efficiency with controllable force and integrated safety features.

MAXIMIZES PRODUCTIVITY - RELIABLE - IMPROVES ROLLING PROCESSES
