

HYSON has successfully completed and passed our AS9100D/ISO9001:2015 recertification audit!

AS9100, endorsed by all major aerospace regulators including US Department of Defense (DoD), Federal Aviation Administration (FAA) and NASA, is the required Quality Management System for organizations in the aerospace sector. AS9100D is the latest and most stringent revision, including processes for change management, accountability, communication, safety, ethics, and supplier monitoring.

The third party audit, conducted by TRNA, compared our processes and procedures against the widely adopted international AS9100D and validated our commitment to providing the highest quality products, on time delivery performance and services that meet the expectations of our worldwide customers.

Our success comes from the dedication of our employees to continuously improve our processes, products, and services through the establishment and monitoring of key performance measures and related improvement objectives.
